

WE'RE ALWAYS IN RHYTHM WITH YOUR HEART'S NEEDS

We just love February. The runt of the calendar holds an outsized place in our hearts as a time to focus on caring for the engine that keeps all of us going. But as another February heart month bids adieu, another calendar *marching* forward, we continue to concentrate on moving cardiovascular care forward. And that's not just in February. Or March. It's a year-round focus for us to help people live their best lives.

Quote ...

"Vascular patients are patients for a lifetime. It is no different than cancer. And just like cancer -- restenosis with ischemia or just like re-ulceration with diabetic foot complications -- these patients are not 'cured.' They are in remission."

Who said that and what are they talking about? Keep reading and see below ...

LISTEN TO YOUR HEART: CARDIAC HEALTH HAS NO AGE RANGE

Our new cross-cardio study finds heart-related health conditions can pose a risk to people of all ages.

THE REVEL IS IN THE DETAILS HEARTMATE 3

This month's focus: Our HeartMate 3. The power it takes to fully support the circulation of a person living with a HeartMate 3 left ventricular assist device -- or LVAD -- is about 4 watts. Or about the same juice required to turn on the lowest-powered night light. All for a machine that spins at a normal operating speed of about 5,000 rpm. Wow! [Learn more about HeartMate 3 here.](#)

... and answer

That's David G. Armstrong, D.P.M., M.D., PhD, Professor of Surgery Director, USC Limb Preservation Program Keck School of Medicine of University of Southern California (USC). He's talking about the importance for diligence in on-going care for people living with coronary artery disease (CAD) and peripheral artery disease (PAD) and the challenges they face when technology that can help them stay connected to their care team isn't accessible. Bridging those gaps is among the key findings in our recently published white paper, "Beyond Intervention 3: The Post-Intervention Patient Experience."
